

Automotive Relays

103 / 103T Automotive relays

These power relays with their small dimensions 14x7.2x13.5mm for the single relay version and 14x14x13.5mm for the twin relay version need a very little place on the PC-Board.

The 103 and 103T are proposed with N/O contact form or C/O contact form with either AgNi or AgSnO contact materials.

They can switch a maximum load of 20A/14VDC and have a sensitive coil of 0.64W.

The 103 and 103T are especially designed for following car applications:
Power window, door lock, door mirror, power sun roof, defogger, power seat, hazard flasher, power steering etc.

In conformity with SONG CHUAN environment policy the 103 complies with ELV and RoHS European directives.
